

HW04 Execution and Stability Review

Evidence source: `reports/run-manifest.json`, verified at `2026-08-08T01:48:00.391Z`. All runs used `workers=1`, `retries=0`, and real Chromium/Firefox/WebKit engines.

Feature	Browser	Passed	Failed	Skipped	Test duration	Classification summary
FR-02	Chromium	9	6	0	78.198 s	6 SUT_DEFECT
FR-02	Firefox	9	6	0	86.432 s	same 6 SUT_DEFECT signatures
FR-02	WebKit	9	6	0	83.272 s	same 6 SUT_DEFECT signatures
FR-11	Chromium	12	1	0	11.386 s	1 SUT_DEFECT
FR-11	Firefox	12	1	0	22.144 s	same SUT_DEFECT
FR-11	WebKit	12	1	0	20.821 s	same SUT_DEFECT
FR-14	Chromium	10	6	0	13.474 s	6 SUT_DEFECT
FR-14	Firefox	9	7	0	38.895 s	6 SUT_DEFECT + 1 FLAKY teardown
FR-14	WebKit	10	6	0	23.651 s	same 6 SUT_DEFECT

Commands: `npm.cmd run test:matrix` and `npm.cmd run report:verify` with the documented synthetic credential environment variables. Matrix wall time was 469.5 seconds. The verifier passed all nine entries for report existence, Student ID, feature/browser, ISO timestamp, and counts.

Failure analysis

- FR02-TC-009/010 — SUT_DEFECT: both login controls render `type="text"`.
- FR02-TC-012..015 — SUT_DEFECT: backend increments attempts by 2 and locks for 180000 ms, contradicting the threshold/30-second requirement. Source evidence: `../eshop-sut/backend/server.js:54-61`.
- FR11-TC-012 — SUT_DEFECT: UI/backend allow cancel while shipping; source evidence: `../eshop-sut/backend/server.js:321-337` and the profile action rendering.
- FR14-TC-005/006/007 — SUT_DEFECT: category create inserts unvalidated names.
- FR14-TC-009 — SUT_DEFECT: delete always returns 200 without checking affected rows.
- FR14-TC-011 — SUT_DEFECT: category input lacks native `required` and a visible required marker.
- FR14-TC-016 — SUT_DEFECT: authenticated customer can mutate categories because the route checks authentication but not admin role. Source evidence: `../eshop-sut/backend/server.js:249-275`.

- FR14-TC-008 Firefox matrix failure — FLAKY: browser-context teardown protocol error. A targeted `--repeat-each=3` run passed 3/3 in 10.3 seconds at <reports/stability/fr14/firefox-tc008-repeat/index.html>.

No failure was classified ENVIRONMENT or BLOCKED. No retry was enabled. The identical stable failure sets across Chromium and WebKit, plus source evidence, support the SUT classifications.

Human review points

- PENDING: confirm whether the rubric treats the word “CRUD” as requiring update; the explicit FR-14 bullets reviewed so far require create/view/delete, so no update oracle was invented.
- PENDING: accept the Firefox teardown event as FLAKY rather than a product bug.
- PENDING: approve bug drafts before any GitHub Issue is published.
