Draft	Feature / cases	Expected	Actual	Priority	Evidence
BUG-01 Login inputs use wrong native types	FR-02 TC-009/010	email/password types	both text	P1 accessibility/security UX	screenshot below; three FR-02 reports and traces
BUG-02 Lock attempt arithmetic	FR-02 TC-012/013	+1; lock on third	+2; premature lock	P0 core security rule	screenshot below; server.js:54-61; reports
BUG-03 Lock duration/feedback	FR-02 TC-014/015	specific feedback; 30 s	generic UI; 180 s	P0 account availability	screenshot below; server.js:40-57; reports
BUG-04 Shipping order cancellable	FR-11 TC-012	no cancel at shipping	third cancel action shown/accepted	P0 order integrity	screenshot below; server.js:321-337; reports
BUG-05 Invalid category names accepted	FR-14 TC-005/006/007	HTTP 400	HTTP 200	P1 data integrity	REST screenshot below; server.js:249-253; reports
BUG-06 Unknown delete reports success	FR-14 TC-009	HTTP 404	HTTP 200	P1 API correctness	REST screenshot below; server.js:269-275; reports
BUG-07 Category field lacks required contract	FR-14 TC-011	native/visible required	neither present	P1 validation UX	screenshot below; three reports/traces
BUG-08 Customer can create category	FR-14 TC-016	HTTP 403	HTTP 200	P0 authorization	REST screenshot below; server.js:249; reports

The Firefox TC-008 protocol teardown is excluded because it is classified FLAKY and passed 3/3 repetitions. FR14-TC-012 confirmation is excluded because it is exploratory, not an FR-14 requirement.

Screenshot evidence

All images below are original Playwright failure artifacts from Chromium executions. They have only been copied and renamed for the submission; their pixels were not edited.

BUG-01 — Password control displays the entered value

FR02-TC-010 expected a masked password control. The captured value remains visibly rendered as plain text.

BUG-02 — Correct login below the documented threshold fails

FR02-TC-012 submits the correct password after two failed attempts. The generic failure visible in the screenshot supports the premature-lock symptom; the trace and server source establish the incorrect +2 attempt arithmetic.

BUG-03 — Locked account receives generic feedback

FR02-TC-014 expected appropriate locked-account feedback. The UI only displays the generic login failure message.

BUG-04 — Shipping order still exposes Cancel

FR11-TC-012 shows order #10 in `Đang giao` status with a visible `Hủy đơn` action, although a shipping user must not be allowed to cancel it.

BUG-07 — Category name field has no visible required contract

FR14-TC-011 captures the category form with an empty field, no visible required indicator and an enabled Thêm mới action.

BUG-05 — Empty category name returns success

The REST Client capture shows FR14-TC-005 sending { "name": "" }. The annotated oracle expects 400 Bad Request, but the actual response is HTTP/1.1 200 OK with Category created and ID 99.

```
hw > hw4 > 23127334_HW04_AI_Automation_100 > automation > rest >  fr14-bug-evid
```

```
### BUG-05 / FR14-TC-005 - empty category name  
# Expected: 400 Bad Request  
# Current defect: 200 OK with "Category created"  
# @name bug05EmptyName
```

```
Send Request
```

```
POST {{api}}/api/categories
```

```
Authorization: Bearer {{adminLogin.response.body.$.  
token}}
```

```
Content-Type: application/json
```

```
50 {  
  | "name": ""  
  | }  
}
```

BUG-06 — Deleting an unknown category returns success

The request deletes category ID 999999999. The annotated oracle expects 404 Not Found, but the actual response is HTTP/1.1 200 OK with Category deleted.

hw4 > 23127334_HW04_AI_Automation_100 > automation > rest > fr14-bug-evidence.res

BUG-06 / FR14-TC-009 – delete a category that does not exist

Expected: 404 Not Found

Current defect: 200 OK with "Category deleted"

Send Request

DELETE {{api}}/api/categories/999999999

Authorization: Bearer {{adminLogin.response.body.\$.token}}

BUG-08 / FR14-TC-016 – customer creates a category

Expected: 403 Forbidden because only admin may mutate categories

Current defect: 200 OK with "Category created"

BUG-08 — Customer token creates a category

The REST Client capture uses the chained customer login token. The annotated oracle expects 403 Forbidden, but the actual response is HTTP/1.1 200 OK with Category created and ID 100.

```
### BUG-08 / FR14-TC-016 - customer creates a category
# Expected: 403 Forbidden because only admin may mutate
categories
# Current defect: 200 OK with "Category created"
# @name bug08CustomerCreate
Send Request
POST {{api}}/api/categories
Authorization: Bearer {{customerLogin.response.body.$.
token}}
Content-Type: application/json

{
  "name": "REST evidence customer forbidden"
}
```

For manual response screenshots, open [fr14-bug-evidence.rest](#) with the VS Code REST Client, start the backend, and send its requests from top to bottom. It includes explicit expected/current statuses plus cleanup calls for any categories created while reproducing BUG-05 and BUG-08.
